

Occasional Invaders – Client Preparation

One-Time or HPP Treatments - Interior or Exterior

Your Greenshield Pest Control technician will require the following interior and exterior preparation steps to be completed prior to their arrival to ensure a safe and effective treatment

Pre-Treatment Instructions

Interior (if applicable)

- All people and pets must vacate the unit during service for a minimum of 4 hours post-treatment
- Infants, children under two, pregnant individuals and individuals with underlying health conditions such as heart, kidney, respiratory ailments or allergies must not re-enter for a minimum of 24 hours post-treatment. Consult a physician for any further re-entry requirements.
- Fish tanks/terrariums are to be covered with plastic/sheet/towel prior to treatment
- Do not apply store bought pesticides or natural pesticides (eg. diatomaceous earth, borax) Greenshield is required to wait 10 days prior to applying additional pesticides
- Remove items away from baseboards at least 10"
- Thoroughly vacuum/sweep floors prior to treatment
- Clean up all food waste (garbage, dishwashers, spilled food behind appliances)

Exterior (if applicable)

- DO NOT allow people or pets to re-enter treated outdoor areas until residues have dried.
- Close all windows prior to exterior treatment
- Move planters & patio furniture at least 10" away from the all if possible
- Edible plants are to be moved or covered or the area will be avoided during spraying at the technician's discretion

Occasional Invaders – Client Preparation

One-Time or HPP Treatments - Interior or Exterior

Post-Treatment Instructions

Interior

- Ventilate areas by opening windows for at least 20 minutes following re-entry
- Avoid mopping 6" away from baseboards for 30 days post-treatment
- Continue to eliminate any potential food sources
- Pests such as millipedes, centipedes, sow bugs or other basement dwellers require a reduction in humidity levels. Reduce humidity in affected areas by using a dehumidifier and addressing drainage issues.

Exterior

- Consider sealing any potential entry points pointed out by your technician with exterior silicone
- Remove any blockages in gutters to avoid accumulation of damp material and to encourage proper drainage of rainwater
- Keep vegetation surrounding the house to a minimum to discourage damp/moist conditions
- Avoid storing firewood against the house

The presence of occasional invaders are dependent on a number of factors. Your Greenshield technician will discuss an IPM approach which will include a combination of not only pesticides but environmental factors such as humidity and reduction of harborage areas. Allow 30-90 days for treatment to work. 100% elimination of occasional invaders may not be possible.
